CODING PRACTICE WEBSITE

RAJIV GANDHI TECHNICAL UNIVERSITY, BHOPAL (M.P.)

2022 – 2023

IN PARTIALFULFILLMENT FOR THE AWARD OF THE DIPLOMA OF TECHNOLOGY

IN

COMPUTER SCIENCE AND ENGINEERING

SUBMITTED BY:

Diya Bhargava (20105C04010)

UNDER THE GUIDANCE OF

Miss. Asha Grace Kerketta

Mr. Navneet Upadhya

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

GOVERNMENT POLYTECHNIC COLLEGE, SHIVPURI (M.P.)

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING
GOVERNMENT POLYTECHNIC COLLEGE SHIVPURI

CERTIFICATE

This is to certified that the project entitled "CODING PRACTICE WEBSITE" is completed by Diya Bhargava and Student of polytechnic Diploma Engineering in Computer Science & Engineering of GOVT. POLYTECHNIC COLLEGE, SHIVPURI (M.P.). They have submitted a satisfactory project report for the award of Polytechnic Diploma Engineering in Computer Science & Engineering. To the best of our knowledge, the presented project report has not been submitted for the award of any other diploma or degree certificate.

Mr. R.N. Tiwari

Principal

(Govt. Polytechnic College, Shivpuri M.P.)

Project Guide

Miss. Asha Grace Kerketta

(H.O.D CSE Dept.)

Project Guide

Mr. Navneet Upadhyay

(Lect. CSE Dept.)

ACKNOWLEDGEMENT

It gives me immense pleasure to express my deepest sense of gratitude and sincere thanks to my highly respected and esteemed **guide Lect. Asha Grace kerketta Dept. CSE Government Polytechnic college, Shivpuri (M.P).** for their valuable guidance , encouragement and help for completing this work . Their useful suggestion for this whole work and co-operative are sincerely acknowledgement.

I would like to express my sincere thanks to **Mr. R. N. Tiwari, Principal, Government Polytechnic college, Shivpuri (M.P)** for giving me this opportunity to undertake this project.

I also wish to express my gratitude's to **lect. Asha Grace kerketta, (H.O.D. Computer Science & Engineering)** for his kind hearted support, I am also grateful to my teacher **Mr. Navneet Upadhyay** for their constant support and guidance. I would like to thanks my friends.

I wish also to express my indebtedness to my parents as well as my family member whose blessing and support always helped me to face the challenges ahead.

At the end I would like to express my sincere thanks to all my friends and other who helped me directly or indirectly during this project work.

Place: Shivpuri

Date:__ __ 2023

DECLARATION

We Diya Bhargava here by student of Polytechnic Diploma (Computer Science & Engineering) 6th Semester.

Roll No:- 20105C04010 declare that the project entitled "CODING PRACTICE WEBSITE" submitted for the diploma in engineering (CSE) is my original work.

SIGNATURE

Diya Bhargava (20105C04010)

ABSTRACT

The project is based on **"CODING PRACTICE WEBSITE"** A Coding Practicing Website is information system for education establishments to improve student skills. Student information systems provide capabilities for registering students in courses, transcripts of student tests and other assessment scores; tracking student and managing many other student-related data. Coding Practicing System deals with details report of students, Scores, course, and other resources. It keeps tracks all the details of a student from the day one to the end of his course which can be used for all reporting purpose, Progress report, project or any other assignment details, hiring detail, and manage the website pages content like Contact Us and About Us Pages.

Keywords: - HTML, JAVASCRIPT, CSS, PHP, MYSQl.

Introduction of the Project

1.1 Introduction:

This Website is the Solution for Students those who're looking for coding practice. As we known, there is no specific platform for learning and practicing. Therefore, Plan code platform assures to upgrade students' skills in coding from basic to advance level. A Coding Practicing Website is information system for education establishments to improve student skills. Student information systems provide capabilities for registering students in courses, transcripts of student tests and other assessment scores; tracking student and managing many other student-related data. Coding Practicing System deals with details report of students, Scores, course, and other resources. It keeps tracks all the details of a student from the day one to the end of his course which can be used for all reporting purpose, Progress report, project or any other assignment details, hiring detail, and manage the website pages content like Contact Us and About Us Pages.

1.2 Purpose:

The Coding Practicing Website system is an automated version of manual Student Practicing System. It can handle all details about a student. The details include Student details, subject details, Test details etc... In case of manual system, they need a lot of time, manpower etc. Coding Practicing Website system is managed by an administrator. It is the job of the administrator to insert update and monitor the whole process. When a user logs in to the system. He would only view report of the student. He

can't perform any changes. In our project, the Coding Practicing Website system is particularly designed to provide updates through the admin of the respective students. Project administers three sectors. First is Admin Login where admin will update the results of test and Conducting Interview; second is the Student Login who add the new Courses and enroll in several test.

1.3 Objectives:

In order to analyze the existing system, following objectives are set:

- To understand the existing system, examine old websites and register the detailed scenario.
- To determine the requirements.
- To determine the INPUT and OUTPUT requirements.
- To determine the problems and recommend the solution.

1.4 Scope:

This software is required for:

- More enchanting and professional touch.
- Database accessibility.
- Further dynamic information provision.
- Effortless retrieval and access of the information of department in all trade.
- Entirely connected to each other.

1.5 Benefits:

The following are the main benefits of the proposed software-

- Easy maintenance of the information.
- Conserve time and human efforts.
- Relieve task of searching.

2. ANALYSIS

2.1 System Analysis:

System development can generally be thought of as having two major components –

System architecture and system design.

• **System design** is the process of planning a knowledge system or one to replace or compliment an existing system. But before this planning can be done, we must thoroughly understand the old system and determine how computer can be used (if at all) to make its operation more effective.

• **System Architecture** is the process of gathering and interpreting facts, diagnosing problems and using the information to recommend improvements to the system.

2.2 Identification of Need:

Integration and Test Phase: The various components of the system are integrated and systematically tested. The user tests the system to ensure that the functional requirements as defined in the functional requirements documents are satisfied by the developed or modified system. Prior to installing and operating the system in a production environment the system must undergo certification ad accreditation activities.

Implementation Phase: The system or system modifications are installed and made operational in a production environment. The phase is initiated after the

system has been tested and accepted by the user. This phase continues until the system is operating in production in accordance with the defined user requirements.

Operation and maintenance phase: The user operation is ongoing. The system is monitored for continued performance in accordance with user requirements and needed system modifications are incorporated. The operational system is periodically assessed through In-Process Reviews to determine how the system can be made more efficient and effective. Operation continues as long as the system can be effectively adapted to respond to an organization need. When modification or changes are identified as necessary the system my re-renter the planning phases.
Disposition Phase: The disposition activities ensure the orderly termination of the system and preserve the vital information about the system so that some or all of the information may be reactivated in the future if necessary. Particular emphases is given to the proper preservation of the data processed by the system so that the data is effectively migrated to another system or archived in accordance with applicable records management regulations and policies for potential future access.

2.3 System requirements specification:

2.4.1 Software specification:

System Type:	Personal Computer
Processor:	Minimum: 1.60 GHz Intel processor Recommended: 2.40GHz Intel processor
SVGA Modes:	Minimum: 800x600 256 Colors Recommended: 1024x768 High Colors 32 bit
Tools:	Vs code

Front End:	HTML, CSS, JS, XML
Backend:	MY SQL, PHP

2.4.2Hardware Specification:

Operating system	Windows 11
Other Software	Web server and web browser (chrome, Firefox, Microsoft edge)

Explain what you understand by computer programming

computer programming is the process of encoding an algorithm into a notation, typically a computer program, by means of some programming language so that it can be executed by a computer.

Explain an algorithm. What are some of its important features

An algorithm can be defined as a set of finite steps that when followed helps in accomplishing a particular task. Important features of an algorithm are clarity, efficiency, and finiteness.

Provide a brief explanation on variables

Variables are used for storing the input of a program as well as the computational results during program execution. These are actually named memory locations. The value stored in a variable can change during the program execution.

Could you explain arrays

An array is a programming structure that is a collection of several data values of the same type. In terms of memory, an array is a group of contiguous memory locations storing data of the same type.

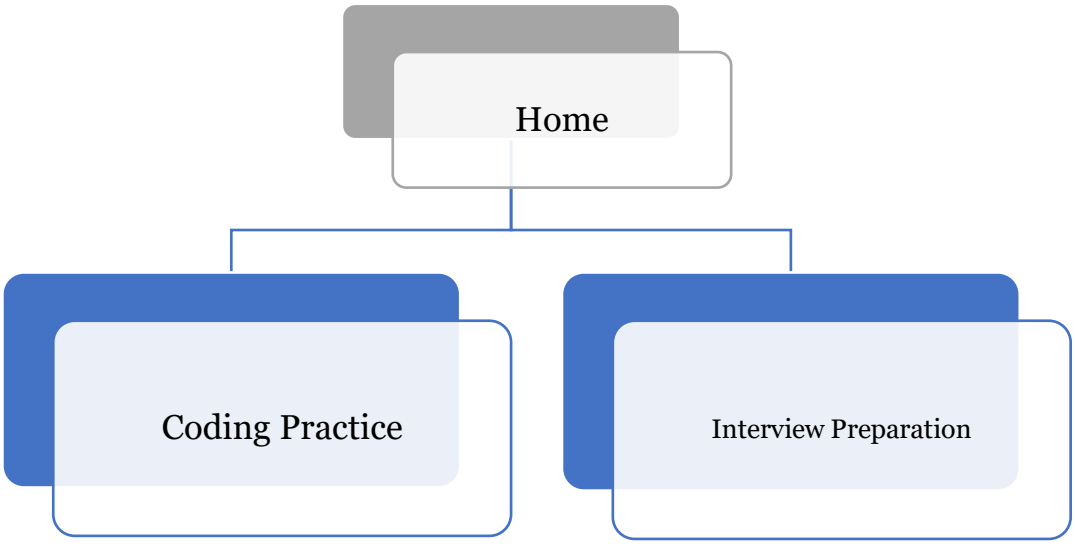
What do you understand by a subroutine?

A self-contained set of statements usable from anywhere in a computer program is known as a subroutine. Once the subroutine successfully performs its intended task it returns the control to the section of the program called the subroutine

3. DESIGN

Data Flow Diagram (DFD):

Coding Preparing Management:



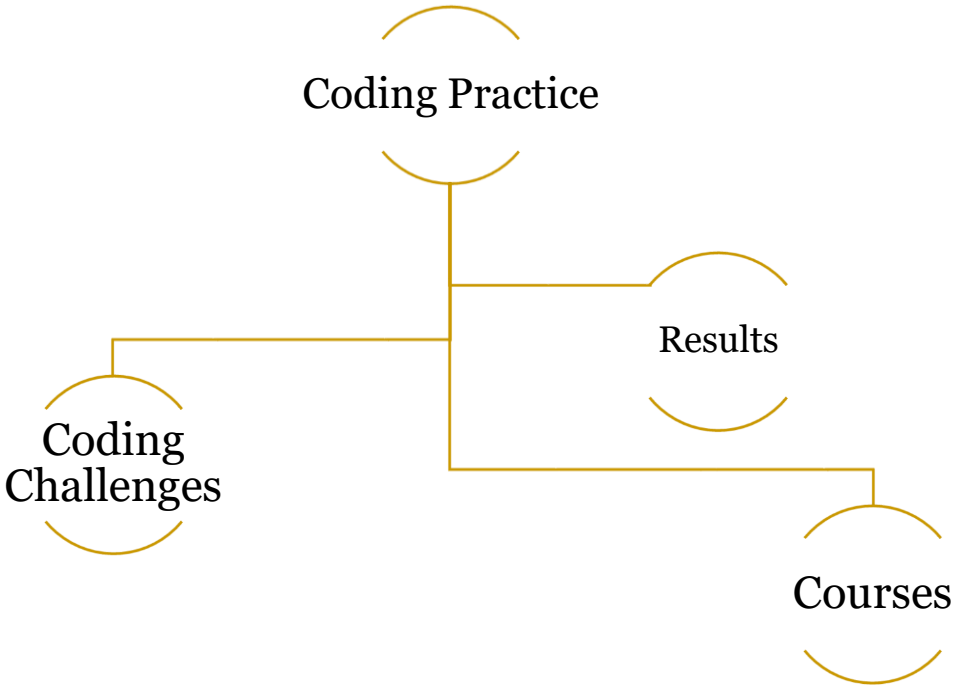


Figure: Student-Page

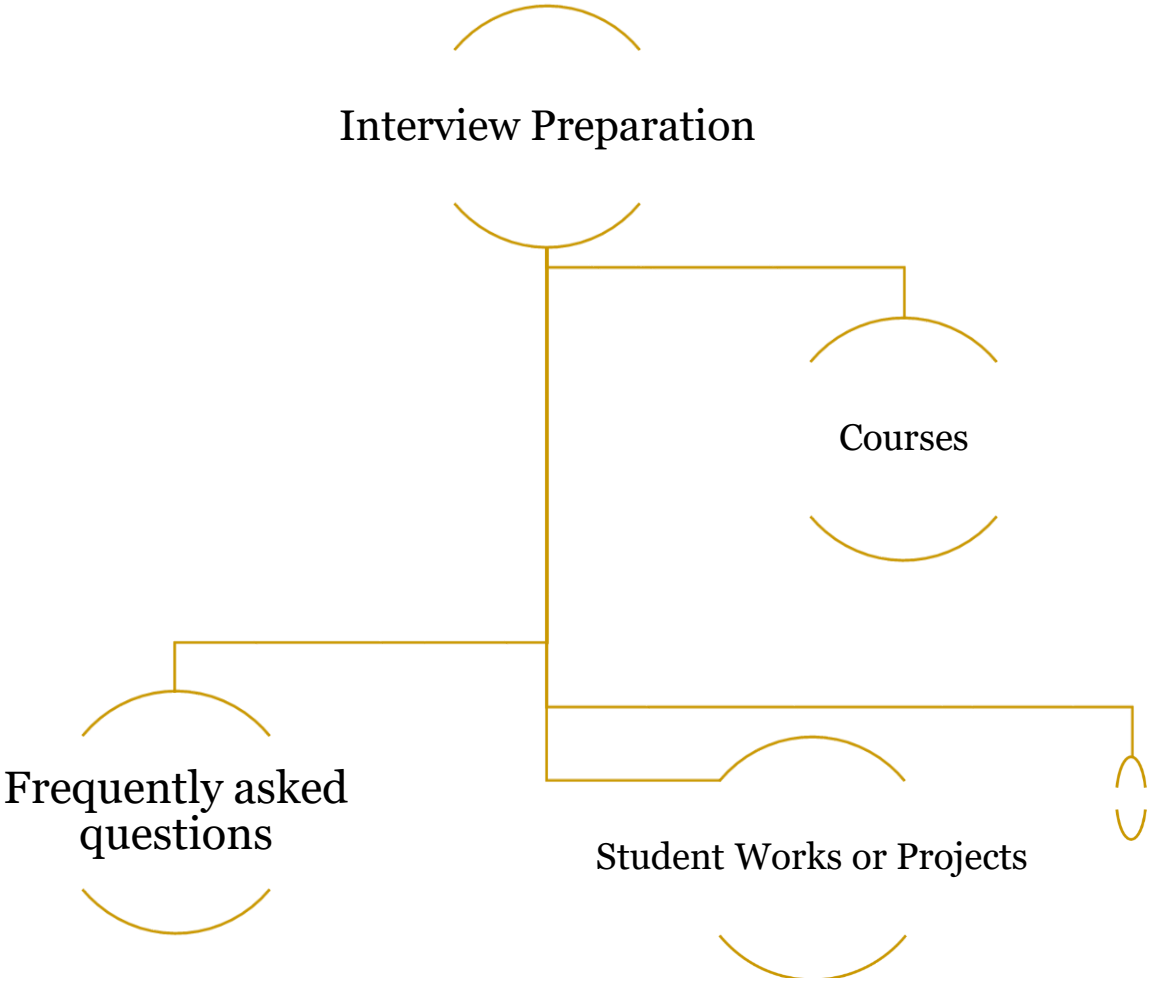

5. Testing Process

System testing is used in association with verification and validation-.

- Verification-Have we built the Website right (i.e., does it match the specification).
- Validation-Have we built the right website (i.e., is this what the customer wants)

Student Login:

Tests that user's login with proper username and password. Steps to check this are as follows –

- Visit Login Page
- Enter Username
- Enter Password
- Click Login
- See the Terms of Use Page
- Click Agree at Page
- Button
- Click Submit
- See Results page
- Verify welcome message is correct username

6. Future Scope & Enhancement: -

- Kickstart Information: Through this service one can access the complete information about the Coding Preparation such as courses available, Enrollment procedure, placements, events, achievements etc.
- Student tracking: Any organization that want to check the summary about the student, so that they will be able to choose the particular students for their placement and for that purpose they will be given a particular link through which they can access the information required.
- Result Notification: This facility notifies students about their result status.

7.2 Future Enhancement:

- Online examination module would be introduced to conduct online examination.
- Further, upload the videos of their lectures on to this site and students who had missed those classes can view those videos.
- More functionality can be added depending upon the user requirement and specification like events in future their registration.
- By providing additional functionality like Student Company's interaction.
- We can enhance it by making the same project to work on internet.

7. Conclusion: -

Coding Management System deals with management of routine practicing work, course details and other resources. It tracks all the details of a student from day one to end of his/her course which can be used for all reporting purpose, tracking of results, progress in the course, interviews. In our Project, The Coding Management system is particularly designed to improve skills and to give the updates to the students. Project Company's sectors. First is Company's Login where admin will update the new student and updates the marks. Student will be able to login and check their marks with respect to their subjects. We had tried to cover every routine aspect of the management of Kickstart so that the retrieval of information is on finger tips, also reports generated during retrieval is having sufficient and satisfactory data.

8. List of Abbreviation:

This glossary contains a list of the technical words used in the documentation of the project –

Analysis: The examination and evaluation of the relevant information to select the best course of action from among various alternatives.
